SUMMARY

Hands-on Solution Architect and Senior Java Developer with 14+ years of experience building scalable distributed systems using Java and Spring Boot. Strong expertise in microservices, event-driven architecture, and clean system design, with a focus on delivering reliable, production-ready enterprise solutions.

TECHNICAL CORE

Languages: Java (8–21+), SQL, JavaScript

Frameworks: Spring Boot, Spring MVC, Hibernate, JUnit

Architecture: Microservices, Event-Driven Systems, REST APIs, Design Patterns, Clean Architecture

Databases: PostgreSQL, MariaDB, DB2, Oracle

DevOps & Tools: Docker – Kubernetes (Basics), Jenkins, SonarQube, Git

Platforms: Linux, Apache Tomcat, WebLogic, Splunk, Netcool OMNibus

Domain: Telecom, Retail

PROFESSIONAL EXPERIENCE

ERICSSON INDIA Pvt Ltd | Chennai

Solution Architect | Dec 2021 – Present

Platform handles large-scale telecom alarm processing across multiple customer environments.

- Led the end-to-end migration of the telecom fault management platform from monolithic architecture to Spring Boot–based microservices integrated with Netcool, improving system stability and performance.
- Designed and implemented event-driven microservices using Java and Spring Boot for scalable telecom fault management systems.
- Improved system availability to ~99% and reduced production defects through architecture modernization and performance optimization.
- Worked closely with customer stakeholders to gather requirements and translate them into scalable technical solutions, reducing operational overhead and manual work orders.
- Designed and developed a centralized Configuration Manager service used across the fault management platform.
- Optimized database performance by identifying DB hotspots and tuning queries and indexes, ensuring stable performance during peak load.
- Investigated and resolved complex production issues, improving system reliability and operational stability.

- Converted complex alarm processing rules into configurable services, enabling faster onboarding of new features with minimal impact on existing systems.
- Currently involved in designing and developing the next-generation cloud-native platform on GCP (GKE) to improve scalability and high availability.

IBM INDIA Pvt Ltd | Sweden-Chennai-Bangalore

Client: IKEA - Global retail e-commerce platform development

Microservices Application Developer | Feb 2012 -Dec 2021

- Led frontend development for a large-scale retail e-commerce platform, building the web layer using Java (Spring MVC), JavaScript, and JSP on Oracle WebLogic.
- Integrated enterprise commerce platforms including Oracle ATG and WebCenter Sites to support dynamic content and e-commerce workflows.
- Implemented CI/CD pipelines using Jenkins and automated testing with JUnit and Selenium, improving code quality through SonarQube.
- Containerized application components using Docker and leveraged Akamai CDN to improve application performance and content delivery.
- Collaborated with globally distributed business and engineering teams to deliver platform enhancements and support phased rollout across UK and Europe markets.
- Contributed to platform modernization efforts, supporting migration from legacy Spring MVC architecture toward Spring Boot-based microservices.

EDUCATION

Bachelor's degree in Electrical and Electronics Engineering – Anna University.
