ASSOCIATE CONSULTANT | BUILDING ROBUST JAVA MICROSERVICES & REACTIVE UIS | SPRING • KAFKA • REACTJS • NOSQL • SQL • K8S | SCALABLE & RESILIENT SOLUTIONS

12+ years of professional experience in the design and development of scalable, high-performance applications using Java and microservices architecture. Specialized in cloud-native solutions, observability stacks, and real-time data processing using Kafka. Adept at modernizing legacy systems, driving DevOps practices, and implementing robust, fault-tolerant APIs. Proven ability to deliver solutions using tools and technologies such as Spring Boot, Kubernetes, Istio, Azure, and distributed databases like Cassandra and Cosmos DB.

SKILLS & COMPETENCIES

Java 8

JEE JSP Servlets

Spring Framework, Spring Boot, Spring MVC, AOP, Data JPA, ORM, Security, Caching, Scheduling, Config, Cloud. RESTful, Webservices, XML, JSON.

Microservices, Istio, Kubernetes, Dockers, Splunk, Dynatrace, Prometheus, Grafana.

SQL, NoSQL, CosmosDB, MongoDB, PostgreSQL, MySQL.

HTML, JavaScript, CSS, ReactJs.

Jenkins, GIT, Jira, Agile methodologies.

EMPLOYMENT HISTORY

TATA CONSULTANCY SERVICES LIMITED – CHENNAI, TAMILNADAN | APRIL 2023 - TILL DATE

Associate Consultant

ADR (Auto Dispute Resolution) is a next-generation automation solution introduced to enhance the client's existing claim and dispute handling system. Traditionally, disputes raised by suppliers required manual verification and processing by client-side employees, often resulting in delays and inconsistencies. ADR integrates with machine learning models trained on extensive historical purchase order and invoice data to provide real-time recommendations on whether a dispute should be settled or closed, along with confidence percentages.

- Lead the development of recommendations application to clients to improve operational efficiency and reduced costs by 50%.
- Integrated backend services with ML model outputs to automate decision-making in the dispute resolution lifecycle.
- Developed Java-based microservices to fetch additional context, enrich dispute data, and trigger automated actions based on ML recommendations.
- Built RESTful APIs to expose dispute decision data to client-side systems and UI applications.
- Collaborated with the ML and data teams to define model inputs and validate outputs against business rules.
- Participated in regular agile ceremonies and contributed to architectural discussions for scaling the ADR solution.
- Ensured accuracy and performance of backend logic by writing unit/integration tests using JUnit and Mockito.

COGNIZANT TECHNOLOGY SOLUTIONS – CHENNAI, TAMILNADAN | SEP 2016 - APRIL 2023

Sr. Associate

US Bank's Online Banking Apply platform enables customer to apply for any loans by online. While applying loans for Mortgage, Home equity, Auto loan, Boat loan, RV Loan, Student loan etc., customer fills out the details for particular loan and submits for approval. Before submitting loan request, customer can perform an instant prequalification and get the result. This will provide the customer with the estimated prequalified loan amount and estimated monthly principle &

interest payment information. Upon request completion they will be contacted by a corresponding loan professional to process further. This project allows customer for an online experience and creates better quality leads that will convert into U.S. Bank loan applications.

- Led backend development for the Investment Module and integrated it into the existing loan application system.
- Developed and consumed RESTful and GraphQL APIs to support both frontend and internal service interactions.
- Implemented MongoDB and Cassandra-based DAOs for handling high-throughput data access and storage.
- Built Kafka consumers for processing real-time loan event streams.
- Coordinated with UI teams to ensure alignment and timely delivery of features.
- Wrote comprehensive unit tests using Mockito and integrated code into CI/CD pipelines using Jenkins.
- Managed code repositories using Git and tracked project progress via JIRA.

The objective of the Warehouse Management System (WMS) Project is to provide target architecture for the existing application to migrate from AS 400 to Java EE based application. The management of the various warehouse activities is taken care by Warehouse Management System (WMS). A “WMS” is a software Application designed to direct the flow of materials both into and out of specific storage locations, in an ordered sequence, based upon a predetermined set of operational parameters.

- Implemented data access logic using Spring Data JPA and Hibernate for seamless interaction with relational databases.
- Utilized Maven for project build and dependency management; configured automated builds as part of the CI/CD pipeline.
- Wrote unit and integration tests for Controller, Service, and DAO layers using TestNG to ensure code quality and functionality.
- Addressed SonarLint and SonarQube code quality issues proactively to maintain high code standards and reduce technical debt.

QUESS CORP (FORMERLY KNOWN AS MAGNA INFOTECH) – CHENNAI, TAMILNADAN | MARCH 2015 – SEP 2016

Java Developer

TRANSVISION SOFTWARE AND DATA SOLUTIONS PVT LTD – BANGALORE, KARNATAKA | FEB 2013 - MARCH 2015

Java Developer

EDUCATION

Bachelor of Technology – Information Technology | Quba College of Engineering and Technology, Nellore, Andhra Pradesh.
